## ***Tips for planning your courses***

**Try to spread out core courses so that you only have 2 (max 3) core classes each term.**

### **Start with physical/mathematical sciences.**

Plan your chemistry classes first, in one of the following orders:

- CH101/102, CH201/202, CH221/222, CH223/224, OR
- CH101/102, CH221/222, CH223/224, CH201/202 (*advantage of this order is that CH221 is a pre-req for more of your core classes*).

Plan your Calculus courses second.

Plan Physics third. It is not recommended that you take PY211 and CH221 the same term.

### **Next, plan your Biological Sciences courses.**

BIO181/183 should be taken first.

MB351 (if required/desired) must be taken after CH221.

BCH351 (if required/desired) must be taken after CH223.

Do not take BCH and GN311 together.

Pay attention to when courses are offered (noted in the online Course Catalog)

### **Next, plan your major electives.**

Plan more difficult electives and those with labs first to spread them out and balance your terms.

Fill in with other courses as desired.

### **Finally, fill in with GEP courses, Free Electives, and other desired classes.**

When choosing two of your GEP courses, try to choose GEPs that also cover the USD and GK requirements.

### **Courses required or recommended *before* the MCAT**

- BIO181, 183
- Calculus
- All chemistries
- All physics
- Biochemistry
- Social Sciences (at least PSY200, SOC2\*\*)
- Ethics
- Recommended: GN311, MB351
